

Task: Tech Support- Intern (Full Stack Development)

Problem Statement:

- Create a signup page where a user can register with following details(Name, email, password, confirm password).
- A login page to log in with the details(email & password).
- After successful login it should redirect to a profile page which should contain additional details such as age,gender,dob,mobile, etc that can be updated by the user.
- Once the user logs out it should redirect to the login page.

Things to remember:

- All your fields should be validated at the client side.
- Show relevant success/alert/error messages to the user wherever it's needed.
- All the user details need to be stored in the database(MongoDB/MySQL).
 - Use any of the online databases.
- All your HTML, CSS, JavaScript code should be aligned and kept as separate files.
- All files need to be submitted with GitHub.
- Your project should be hosted with AWS/Heroku/Netlify.

Note: The above task has to be implemented with

Frontend: Reactjs

Backend : Nodejs
